

## Instructions: Go out at night and count lights

- To start a survey, click the yellow “+ button” and then click “Use a transect from map”. Select a transect (yellow or blue line) from the map. You can only survey a street when you are within 50 m distance of it.

- The first step is to answer a question about the amount of people that you can see on the transect when you are standing at the starting position. Use the slider to set the number of people, then click “Start” to continue.

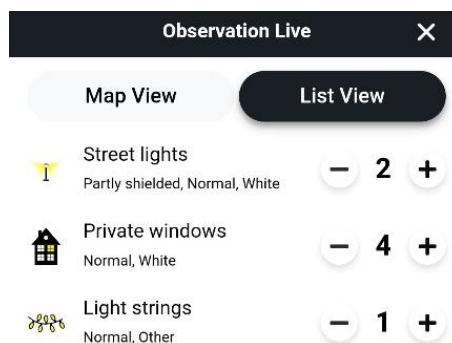

Standing at the start position, how many people can you see on the transect? \*

Use the slider to select a value

- After starting the survey, use the “add light button” (bottom right) to add the first light source you see.

- Walk along your transect, adding lights as you go. If you switch from “Map View” to “List View”, you can easily add or subtract lights of the same categories you have already counted using the plus and minus buttons.

- Once you have counted all the lights, click the “Finish” button (at bottom left).

The Nightlights Project: We count lights, because the night counts!

- Answer a set of additional questions about the street.

### Summary ✕

Number of vehicles\*

—————

**Use the slider to select a value**

How many of the lights you counted were turned on by motion sensors?\*

How many households live along this transect?\*

Standing at the end position, how many people can you see on the transect?\*

—————

**Use the slider to select a value**

- All of the sliders must be set, and all of the questions must be answered, with the exception of the question regarding your thoughts about safety, which is optional.

How lively was the street?\*

Now a quick question regarding crime. How safe would you feel if you were to walk alone on this street at this time?

Comments (Optional)
